# **progress-interface**

***Release 0.1***

**Jared Lumpe**

**Nov 06, 2021**

**CONTENTS:**

<b>1</b>	<b>API</b>	<b>1</b>
<b>2</b>	<b>Indices and tables</b>	<b>9</b>
	<b>Python Module Index</b>	<b>11</b>
	<b>Index</b>	<b>13</b>

## 1.1 progress\_interface.base

Core functionality.

**class** progress\_interface.base.**AbstractProgressMonitor**

Bases: abc.ABC

Abstract base class for an object which tracks the progress of a long-running task and possibly displays it to the user.

Concrete subclasses must implement the *moveto()* and *create()* methods along with the *n*, *total*, and *closed* attributes. They may also optionally override *increment()* and *close()*.

**n**

Number of completed iterations. Do not modify directly, use the *increment()* and *moveto()* methods instead.

**Type** int

**total**

Expected total number of iterations.

**Type** int

**closed**

Whether the monitor has been closed/completed.

**Type** int

**close()**

Stop tracking/displaying progress and perform whatever cleanup is necessary.

**classmethod** **config**(\*\*kw)

Get a *ProgressConfig* which creates instances of the class with the given default settings..

Keyword arguments are passed on to *create()*.

**Return type** *progress\_interface.base.ProgressConfig*

**abstract classmethod** **create**(total, \*, initial=0, desc=None, file=None, \*\*kw)

Factory function with standardized signature to create instances of the class.

**Parameters**

- **total** (*int*) – Total number of iterations to completion.
- **initial** (*int*) – Initial value of *n*.
- **desc** (*Optional[str]*) – Description to display to the user, if applicable.

- **file** (*Optional[TextIO]*) – File-like object to write text output to, if applicable. Defaults to `sys.stderr`.
- **\*\*kw** – Additional options depending on the subclass.

**Return type** *progress\_interface.base.AbstractProgressMonitor*

**increment**(*delta=1*)

Increment the position of the monitor by the given value.

**Parameters** **delta** (*int*) –

**abstract moveto**(*n*)

Set the monitor's position to the given value.

**Parameters** **n** (*int*) –

**class** `progress_interface.base.NullProgressMonitor`

Bases: *progress\_interface.base.AbstractProgressMonitor*

Progress monitor which does nothing.

**close**()

Stop tracking/displaying progress and perform whatever cleanup is necessary.

**increment**(*delta=1*)

Increment the position of the monitor by the given value.

**Parameters** **delta** (*int*) –

**moveto**(*n*)

Set the monitor's position to the given value.

**Parameters** **n** (*int*) –

**class** `progress_interface.base.ProgressConfig`

Bases: `object`

Configuration settings used to create new progress monitor instances.

This allows callers to pass the desired progress monitor type and other settings to a function without needing to know the total length and other details about the task, which can be determined within the function body.

**factory**

The *AbstractProgressMonitor.create()* method of a concrete progress monitor type, or another factory with the same signature which returns a progress monitor instance.

**Type** `Callable[[int], progress_interface.base.AbstractProgressMonitor]`

**kw**

Keyword arguments to pass to `factory`.

**Type** `Dict[str, Any]`

**\_\_init\_\_**(*factory, kw*)

**Parameters**

- **factory** (*Callable[[int], progress\_interface.base.AbstractProgressMonitor]*) –
- **kw** (*Dict[str, Any]*) –

**create**(*total, \*\*kw*)

Create a progress monitor instance by calling the factory function with the stored keyword arguments.

The signature of this function is identical to `AbstractProgressMonitor.create()`.

**Parameters** `total (int)` –

**Return type** `progress_interface.base.AbstractProgressMonitor`

**update**(*\*args, \*\*kw*)

Update keyword arguments and return a new instance.

**Parameters** `args (Mapping[str, Any])` –

**Return type** `progress_interface.base.ProgressConfig`

**class** `progress_interface.base.ProgressIterator`

Bases: `Iterator`

**\_\_init\_\_**(*iterable, monitor*)

**Parameters**

- **iterable** (`Iterable`) –
- **monitor** (`progress_interface.base.AbstractProgressMonitor`) –

`progress_interface.base.default_config()`

Get the default `ProgressConfig` instance to use.

Currently attempts to use `TqdmProgressMonitor`, if `tqdm` is not importable prints a warning and uses `NullProgressMonitor`.

**Return type** `progress_interface.base.ProgressConfig`

`progress_interface.base.get_progress(arg, total, initial=0, **kw)`

Create a progress monitor instance.

See `progress_config()` for description of allowed types/values for the argument.

**Parameters**

- **arg** (`Optional[Union[progress_interface.base.ProgressConfig, str, bool, type, Callable[[int], progress_interface.base.AbstractProgressMonitor]]]`) –
- **total** (`int`) – Number of expected iterations.
- **initial** (`int`) – Initial position of progress monitor.
- **\*\*kw** – Additional keyword arguments to pass to progress monitor class or factory function defined by arg..

**Return type** `progress_interface.base.AbstractProgressMonitor`

`progress_interface.base.iter_progress(iterable, progress=True, total=None, **kw)`

Display a progress monitor while iterating over an object.

The returned iterator object can also be used as a context manager to ensure that the progress monitor is closed properly even if iteration does not finish.

**Parameters**

- **itarable** – Iterable object.
- **progress** (`Optional[Union[progress_interface.base.ProgressConfig, str, bool, type, Callable[[int], progress_interface.base.AbstractProgressMonitor]]]`) – Passed to `get_progress()`.

- **total** (*Optional[int]*) – Total number of expected iterations. Defaults to `len(iterable)`.
- **\*\*kw** – Additional keyword arguments to pass to progress monitor factory.
- **iterable** (*Iterable*) –

**Returns** Iterator over values in `iterable` which advances a progress monitor.

**Return type** *ProgressIterator*

`progress_interface.base.progress_config(arg, **kw)`

Get a `ProgressConfig` instance from a variety argument types.

Accepts the following types/values for the argument:

- *ProgressConfig*
- `None` - uses `NullProgressBar`.
- `True` - uses value returned by `default_config()`.
- `False` - same as `None`.
- `str` key - Looks up progress bar class/factory function in *REGISTRY*.
- *AbstractProgressMonitor* subclass
- Callable - factory function. Must have same signature as *AbstractProgressMonitor.create()*.

#### Parameters

- **arg** (*Optional[Union[progress\_interface.base.ProgressConfig, str, bool, type, Callable[[int], progress\_interface.base.AbstractProgressMonitor]]]*) – See above.
- **\*\*kw** – Additional keyword arguments to add to the returned config object.

**Return type** *progress\_interface.base.ProgressConfig*

`progress_interface.base.register(key, arg=None, *, overwrite=False)`

Register a progress monitor class or factory function under the given key.

If `arg` is not `None`, it is converted to a `ProgressConfig` instance and registered immediately. Otherwise a decorator function is returned which registers its argument under the given key.

#### Parameters

- **key** (`str`) – Key to register under.
- **arg** (*Optional[Union[progress\_interface.base.ProgressConfig, str, bool, type, Callable[[int], progress\_interface.base.AbstractProgressMonitor]]]*) – `None` or any value that can be passed to `progress_config()`.
- **overwrite** (`bool`) – Whether to allow overwriting of existing keys.

**Returns** The `ProgressConfig` instance registered if `arg` is not `None`, otherwise a decorator function which registers its argument and returns it unchanged.

**Return type** `Union[ProgressConfig, Callable]`

`progress_interface.base.ProgressArg`

Type alias for argument to `get_config()` and `get_progress()`.

alias of `Optional[Union[progress\_interface.base.ProgressConfig, str, bool, type, Callable[[int], progress\_interface.base.AbstractProgressMonitor]]]`

`progress_interface.base.ProgressFactoryFunc`

Type alias for a factory function with signature `(total: int, **kw) -> AbstractProgressMonitor`.

alias of `Callable[[int], progress\_interface.base.AbstractProgressMonitor]`

`progress_interface.base.REGISTRY = {'click': <progress_interface.base.ProgressConfig object>, 'tqdm': <progress_interface.base.ProgressConfig object>, 'tqdm-notebook': <progress_interface.base.ProgressConfig object>, 'tqdm-std': <progress_interface.base.ProgressConfig object>}`

Registry of string keys to [ProgressConfig](#) instances.

## 1.2 progress\_interface.monitors

Progress monitor implementations.

**class** `progress_interface.monitors.ClickProgressMonitor`

Bases: [progress\\_interface.base.AbstractProgressMonitor](#)

Wrapper around a progress bar from the click library, using `click.progressbar()`.

`__init__(pbar)`

**Parameters** `pbar` – Progress bar object returned by `click.progressbar`.

`close()`

Stop tracking/displaying progress and perform whatever cleanup is necessary.

**classmethod** `create(total, *, initial=0, desc=None, file=None, **kw)`

**Parameters**

- **\*\*kw** – Passed to `click.progressbar`.
- **total** (*int*) –
- **initial** (*int*) –
- **desc** (*Optional[str]*) –
- **file** (*Optional[TextIO]*) –

`increment(delta=1)`

Increment the position of the monitor by the given value.

**Parameters** `delta` (*int*) –

`moveto(n)`

Set the monitor's position to the given value.

**Parameters** `n` (*int*) –

**class** `progress_interface.monitors.TqdmProgressMonitor`

Bases: [progress\\_interface.base.AbstractProgressMonitor](#)

Wrapper around a progress bar from the tqdm library.

`__init__(pbar)`

**Parameters** `pbar` – `tqdm` instance.

**close()**

Stop tracking/displaying progress and perform whatever cleanup is necessary.

**classmethod** **create**(*total*, \*, *initial*=0, *desc*=None, *file*=None, *tqdm*='tqdm.auto:tqdm', \*\*kw)

**Parameters**

- **tqdm** (*Union*[*type*, *str*]) – `tqdm` class to use. Can be a string formatted like '`tqdm.std:tqdm`'.
- **\*\*kw** – Passed to `tqdm` constructor.
- **total** (*int*) –
- **initial** (*int*) –
- **desc** (*Optional*[*str*]) –
- **file** (*Optional*[*TextIO*]) –

**increment**(*delta*=1)

Increment the position of the monitor by the given value.

**Parameters** **delta** (*int*) –

**moveto**(*n*)

Set the monitor's position to the given value.

**Parameters** **n** (*int*) –

## 1.3 progress\_interface.test

Utilities for testing.

**class** `progress_interface.test.TestProgressMonitor`

Bases: `progress_interface.base.AbstractProgressMonitor`

Progress monitor which displays no user information but does track progress information.

To be used for testing.

**\_\_init\_\_**(*total*, *initial*=0, *allow\_decrement*=True, \*\*kw)

**Parameters**

- **total** (*int*) –
- **initial** (*int*) –
- **allow\_decrement** (*bool*) –

**close()**

Stop tracking/displaying progress and perform whatever cleanup is necessary.

**increment**(*delta*=1)

Increment the position of the monitor by the given value.

**Parameters** **delta** (*int*) –

**moveto**(*n*)

Set the monitor's position to the given value.

**Parameters** `n` (*int*) –

`progress_interface.test.capture_progress(config)`

Creates a `ProgressConfig` which captures references to the progress monitor instances created with it.

This is intended to be used for testing functions which create progress monitor instances internally that normally would not be accessible by the caller. The captured instance can be checked to ensure it has the correct attributes and went through the full range of iterations, for example.

**Returns** The first item is a modified `ProgressConfig` instance which can be passed to the function to be tested. The second is a list which is initially empty, and is populated with progress monitor instances as they are created by it.

**Return type** `Tuple[ProgressConfig, List[AbstractProgressMonitor]]`

**Parameters** `config` (`progress_interface.base.ProgressConfig`) –
